PROFESSIONAL SUMMARY

Results-driven Full-Stack Web Developer with **4+ years of professional experience** delivering production-grade web applications for publishing, e-commerce, and enterprise clients. Proficient across the complete development stack — React, PHP/Laravel, Node.js, WordPress, and MySQL — with hands-on experience in Linux server administration, end-to-end project deployment, custom plugin development, and technical SEO. Proven ability to independently take complex projects from Figma design through to deployed, maintainable production systems. Actively seeking an international role where I can contribute immediately to a high-performing engineering team.

WORK EXPERIENCE

Senior Full-Stack Developer

Dec 2024 — Present

Iran Ketab · Tehran, Iran

- Led front-end development and API integration of **ai.iranpod.ir** — a production LLM-powered SaaS platform processing **~5 document requests daily** from multiple publishers via a versioned REST API (OAS 3.0), with async job management, multi-LLM model support, and comparison features.
- Built **2 interactive tools** for Tehran International Book Fair 2025 — a voice-capture feature recording visitors reading excerpts and auto-publishing to Instagram Stories, and an on-demand audio player streaming celebrity-narrated books — collectively generating **700+ sales invoices** across the event.
- Architected and built a scalable **Laravel admin dashboard** for Raybod Publishing's Book Council — managing complex book, author, and publisher datasets with a modular, reusable component structure focused on future scalability.
- Delivered a full-featured **WordPress website** combining a bookstore and editorial wiki for Raybod Publishing — optimized for SEO, responsiveness, and content-heavy management workflows.
- Rebuilt the UI of the Institute for the Intellectual Development of Children from Figma specifications with **pixel-perfect accuracy** using React, improving visual consistency across all breakpoints.

Full-Stack Developer

Oct 2023 — Dec 2024

Bizzzone Company · Tehran, Iran

- Designed and developed **CRM and Admin Panel systems** from scratch using Laravel with a modular architecture and pre-built dashboard templates, improving internal client workflow management.
- Built a **high-performance web crawler** in PHP using Selenium, Facebook WebDriver, and Chromium — scraped **300–400 websites** and indexed **100,000–200,000 links** into a structured database, independently managing the full project lifecycle.
- Configured and maintained **Linux web servers** (AAPanel, Webmin) across multiple client projects, managing end-to-end deployment from server provisioning to production release.
- Created a complete **WooCommerce store** from scratch — including server setup, custom theme development, and bespoke plugin authoring — scaling the product catalog from **100 to 12,000 SKUs**.
- Applied advanced **Technical SEO improvements** (FCP, LCP, CLS, TBT) across multiple WordPress sites, achieving **PageSpeed scores of 92–100** across all monitored pages.
- Integrated **RESTful APIs and third-party services** across multiple production applications, including custom post types, taxonomies, and dynamic archive/single-page templates.

Frontend Developer

Nov 2020 — Dec 2021

Agah e-Commerce · Tehran, Iran

- Built and deployed **responsive websites and landing pages** from concept to production using HTML, CSS, Bootstrap, and JavaScript.

- Worked in an **Agile/Scrum** development environment — participated in sprint planning, code reviews, and daily standups.
- Assessed UX/UI designs for technical feasibility and collaborated with product team on new feature implementations using a mobile-first, cross-browser strategy.

Self-Development & Academic Projects

Dec 2021 — Oct 2023

Islamic Azad University + Independent Study · Tehran, Iran

- Completed advanced **React.js curriculum** — built a full-stack e-commerce application with Redux state management, Firebase backend, and complete authentication flow.
- Delivered **5–10 software projects** for university coursework covering algorithms, databases, and web development fundamentals.
- Self-studied modern full-stack architecture, REST API design, and component-driven development patterns.

KEY PROJECTS

Document Proofing & Translation SaaS — ai.iranpod.ir

SaaS Product

Iran Ketab · 2025 — Present

Built the front-end and API integration layer for a production LLM-powered SaaS platform (OAS 3.0 REST API). The platform offers two core services: **AI document translation** with side-by-side comparison of original vs. translated output, and **Economic Proofing** — configurable LLM-based proofreading with selectable analysis levels, primary/secondary rulesets, and batch-size controls. Implemented async project lifecycle management (create → status polling → logs → download), multi-LLM model selection, and retry logic for failed jobs. Built full user authentication flows (JWT login/logout/token refresh) and user management dashboard.
